

From MilCun...

TS1 Tactical Sniper Rifle

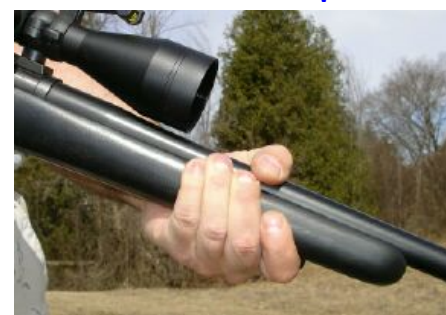

Finally, a rifle that fits! ...and adjusts!

Plus the quality you expect from a MilCun-built sniper rifle

Easy to Shoot in Positions

- Easy to shoot in supported positions
- Easy to shoot in unsupported positions
- Short butt fits all police snipers better - fits heavily muscled operators and snipers wearing vests (adjusts for heavy vest, light vest, no vest)
- Butt stock adjusts 6 ways: in/out, up/down, and angles left/right
- Cheekpiece adjusts 4 ways
- One tool; no spacers required

What is a Good Rifle "Fit"?

- In position, apply "Linda's Rule of Thumb"
- Linda's Rule of Thumb states that when the shooter is in position, the thumb of his trigger hand should be roughly under the tip of his nose, while the butt is snug in the shoulder and the shooter's body is aligned with the bore. This ensures that the shooter is sufficiently close to (and in line with) the receiver to effectively manage recoil. Factory butt stocks are too long to accomplish this, particularly for muscular officers who are wearing body armor.
- In position, ensure shooter's head is level and his aiming eye is aligned comfortably in the scope, without applying lateral force to the cheekpiece. Factory cheekpieces are too thick to do this.
- A good-fitting rifle is completely ambidextrous.
- A good-fitting rifle adjusts for changes in body armor or outerwear... adjusts when personnel changes... adjusts for night sights.
- The MilCun TS1 adjusts quickly with one wrench... and the adjustments stay in place.

Comfortable to Shoot - Muzzle Brake

- Reduces the felt recoil from a .308 to the level of a .223
- Firing volume in training? No problem!
- Maintain your sight picture during recoil
- See the target reaction or the shot splash

Easy to Carry, Easy to Handle

- With scope and loaded 10 round mag - only 13 pounds
- Light enough to be handy
- Slim and slender forestock
- Easy to carry in a "relaxed ready"

Why is good fit important?

- Essential for consistent shot accuracy
- Essential for repeatability of position
- Essential for shooter comfort for the duration
- Essential for shooter attentiveness
- Essential for shooter readiness over a long period
- Essential for consistency

Fast Follow-up Shot

- Extended bolt handle, larger bolt knob
- Easier to work the bolt
- Fast follow-up shots
- Easier to work the bolt past the larger night scopes

**Canadian designed
& Canadian built**

- Built with the sniper's real job in mind
- Includes the best ideas from extensive field trials
- Features the best of modern materials and technology

Anti-Canting Device

- Accuracy depends on keeping the gun level
- Long range accuracy totally relies on a level gun - a very slight cant can cause the shot to miss a target
- Every MilCun TS1 Sniper Rifle is fitted with an anti-canting device
- Can be seen and checked without moving out of your shooting position

Accurate Sight Adjustments Made Easy

- Improved easy-to-read windage dial
- Read left wind and right wind separately
- Wind adjustments easy to make, and easy to make accurately

Reliable Sighting System

- Mounted with picatinny-style rail
- Heavy-duty tactical rings
- Mounted square and zeroed
- Tested to return to zero
- Tested to maintain zero from day to day

Easy to Load and Unload

- Detachable 10-round magazine, providing outstanding ammo control
- Simple loading: attach the mag, close the bolt
- Simple unloading: open the bolt, return one loose round to the mag
- We use HS-Precision - a detachable magazine that actually works!

Easy to Attach and Detach the Bipod

- Carry detached
- Use where operations allow
- Use for training

Bipod Swivels and Stays

- Bipod sets up level, no fuss with leg lengths
- Rifle stays in place once leveled
- Rifle also stays level during recoil
- Follow-up shots will still be level

System Accuracy and Reliability

- Extensive accuracy testing
- Groups are 5 shots at 100 meters
- We use only 168-grain factory match ammo
- Accuracy guaranteed sub-1 MOA
- Best test group so far is less than 1/4 MOA
- CCB testing ensures CCB reliability
- Scope testing ensures scope reliability
- You just don't get this level of confidence from a factory rifle!

The MilCun TS1 stock is a user-friendly, ergonomically designed sniper stock. The overall design makes it lovely to look at and lovely to hold... and as we say at MilCun, "Beauty is as Beauty does."
